

## Getting creative in lockdown for Psychology

Over Christmas and during lockdown the Year 12 and 13 Psychology students have been getting creative as we embark on the new topic's of Bio-Psychology and attachment. They have been keeping themselves busy creating models of the brain to help remember localisation and functions of the brain, playing can you guess the rhythm as part of work on sleep, finding things around the house to create different types of Neurons and even looking after an egg to learn about primary attachment figures. Mrs Wilkinson, Head of Social Studies, said "We're very proud of their efforts and creativity and we hope the students enjoyed doing it as much as we have enjoyed seeing their wonderful efforts".
